

Imaginext Tech Solutions - Skill Assessment

React Framework

Email: support@imaginextech.com

Phone/WhatsApp: **+91-7020541205**

You are expected to create a working application for the simple design given below.

The application is **not** expected to be a full-blown application. We only want to see how you write code for the front-end, and web-services for the application. We also want to see how you structure the database tables for this simple set of use-cases.

If you find any information missing, you may make assumptions and state those assumptions when you submit the assignment.

Use your creativity and common sense where necessary and possible.

Requirement

- Please look at the design below.
- You need to design and develop the page below using **React**.
- You can use any CSS library to match the styling with the design.
- Please populate the data on the page by pulling it from JSON files via a web service.
These JSON files can reside within your application folder.
- Upload your code into a Github repository and host this page over Github pages.
- Share the URL for Github page and repository once you are done with the project via email.
